If the lifters are noisy all the time they should be replaced to prevent rocker arm damage. On the older style tractors the engines used solid lifters with an adjustment between the push rod and rocker arm called the tappet clearance. An excessive tappet clearance will cause a noisy tapping or ticking sound especially when the engine is cold.

Wheel Bearing Noise Simplest check to identify a failing wheel bearing is to suspend the car so that the wheel does not touch the ground. Then grab the wheel and wiggle it back & forth. The hub containing the bearing should not allow the wheel to wiggle back and forth. If it does, chances of having a bag wheel bearing are high. Rear Differential Noise

Understanding and Diagnosing Rear Differential Noise

Wheel 22x4.5 Rim Blank. 22 x 4.5 Blank Rim, No Center Disc, Unpainted Unpainted replacement rim, reuse your Center Disc or Brackets. Use with 7.50-22 tires on John Deere "L" and other tractors. To determine width (4.5") of rim, measure inside, bead to bead, NOT outside to...
